
PRESS RELEASE

Easy as can be with Bravilor Bonamat

Heerhugowaard, the Netherlands, 18 May 2018 — Bravilor Bonamat has launched a new range of coffee machines. The new range satisfies the demand for an ultimately user-friendly, fully-automatic coffee machine for first-time users.

They are coffee machines that customers can understand immediately – essential in self-service environments where you want to avoid queueing at peak times. You can't miss the front of the machine illuminated with LED lights, so customers will find their way straight to the coffee corner. Clear, large, illuminated buttons guarantee that every customer can choose their coffee quickly and easily. Smart sensors and targeted lighting ensure customers always position their cup correctly. And, as the name *Turbo* suggests, the drinks are prepared very quickly. With a pouring height of 150 mm, the machine is perfectly suited to (coffee-to-go) cups.

Eye-catching coffee machine

Bravilor Bonamat is responding to the latest trends with the introduction of these new coffee machines, which are now seen and used as eye-catchers or promotional tools. Proven technologies, great expertise and years of experience have resulted in this new range of coffee machines being made from (patented) components that keep maintenance to a minimum.

They have been developed for non-refrigerated Bag-in-Box coffee and/or instant ingredients such as topping and cocoa. Depending on the model, you can offer various coffee blends or black coffee, coffee crema, cappuccino, hot chocolate, latte and of course hot water for tea from a separate outlet. The Rivero Turbo 203, Rivero Turbo 121 and Bolero Turbo 331 are all available now. For more information, please visit www.bravilor.com.
